

Bodger's Glorious Gleam Hybrids

The Greatest and Finest
NOVELTY of the SEASON
Be sure it is Bodger's
All Double and all Colors
Be sure it is Bodger's

MY Friends, the greatest and finest novelty of the season is Bodger's Glorious Gleam Hybrid Nasturtiums. The seeds grown by the Bodgers are well proportioned in mixture. I feel elated that I can offer these seeds knowing that they will produce double (not single) flowers and come in all the rich colors and variegations, strikingly distinct and attractive. The plants are vigorous and wonderfully free-blooming, making a bed of surpassing beauty and keeping up the rich display throughout the season. They also do well in pots and are showy and beautiful window plants of the easiest culture, blooming in Summer or Winter. The flowers are of great size, the petals deep and broad, borne on long strong healthy stems and deliciously fragrant. The seeds are sure to grow and the plants sure to bloom even under adverse conditions, no other novelty approaches Bodger's Gleam Hybrids in exquisite beauty and delightful perfume and no other plants are more easily grown. I can not too highly praise this glorious novelty. Everyone of my thousands of patrons should get at least one packet and I am glad to offer it. A liberal packet of seeds, enough for a showy bed and will tell you just how to plant and care for it, all for 5 cts. Be sure to buy nothing but Bodger's Gleam Hybrids and see that Bodger's Gleam is printed on the packet. You will then get seeds that produce double (not single) flowers in the greatest variety of colors and markings, (not simply a lot of yellows). Place Bodger's Gleam Hybrids first on your order sheet. It's a novelty you will succeed with and one that will give you unbounded satisfaction and pleasure. I urge all my patrons to get Bodger's Gleam Hybrids. They will rejoice in the glorious beauty of the flowers and thank me for this urgent plea—Do it— Price 5 cts.

MacDonald's Ramona Petunias

THE MOST BEAUTIFUL AND DESIRABLE OF
ALL KNOWN GIANT-FLOWERED PETUNIAS

It is my candid opinion that nothing in the way of Petunias has yet been produced that equal Wm. MacDonald's Improved Ramona Strain. The plants are dwarf and compact, forming globes of big ruffled flowers of all the vivid colors and strikingly attractive variegations. They are magnificent pot plants and for beds far surpass the old hybrid varieties, as they bloom freely for months making a grand exhibition of colors in beds and charming pot plants covered with bloom, the large fls. so completely ruffled that they appear as double flowers when seen at a short distance. I am pleased to offer new crop seeds of this magnificent strain direct from Mr. MacDonald, the seeds saved only from his finest flowers and sure to yield the most satisfactory results. Mr. MacDonald has been years in perfecting this strain of Giant Petunias, giving his special attention to every quality that would impose it in usefulness and beauty. It is an indispensable. 100s. 5c. See page 45.

Finest Perennial Gaillardias

Right here I want to offer Kelway's Giant Perennial Gaillardias. The Kelways have been giving the Perennial Gaillardias special attention and have developed a strain unsurpassed for size, variety and beauty. The Gaillardias also start readily from seeds and begin blooming the first season, but the plants are hardy and continue to do service for many years. They are splendid for planting on the edge of shrubbery on the lawn, fine for permanent beds and very desirable to use as cut flowers. They are very large ranging from 4 to 6 inches in diameter and are of the richest colors and variegations. They grow freely in any good soil and will thrive in partial shade as well as in sun. I offer the seeds with confidence, believing that they will yield the most satisfactory results. My seeds are direct from the Kelways, are of the latest and best strain, including the new and larger varieties. I offer some of the best named varieties as well as a first-class mixture. Packet 5cts.

Cadwell's Fine Hollyhocks

Mr. Cadwell of Conn. has been giving his special attention to Hollyhocks and has developed a giant strain of single Hollyhocks, the plants growing from 6 to 10 ft. high and producing great spikes of silky flowers, large and of the most brilliant and beautiful colors, new and distinct shades. These single Hollyhocks are even more showy and handsome than the double-flowered and are gorgeous in beds and borders, being rich and attractive. A few of the plants may produce double flowers of superi-
